DETAILED ACTION

1. This is response to the Request correction of Notice of Allowance filed on 01/12/06.

Claims 1-12, and 23-24 are pending in the Application.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on October 12, 2001 is being considered by the examiner.

Allowable Subject Matter

3. Claims 1-12 and 23-24 are allowed and renumbered as 1-14.

4. The following is an examiner's statement of reasons for allowance:

The present invention related to an internal power control unit for a flat plasma display for controlling the internal power supply in accordance voltage detected by the a detection unit that detects a first high voltage and drive voltages produced from said high voltage to reduce power consumption. Each independent claim, inter alia, discloses a distinct feature:

In reference to claims 1-8:

“a drive control signal control unit controlling drive control signals of said flat plasma display in response to the decided results of said first and second high voltage decision units and said first and second drive voltage decision units”.

In reference to claims 9-10:

Art Unit: 2674

“wherein the internal power supply controlling unit produces a power supply control signal to stop the operation of the internal power supply circuit in case when any one of the respective detected levels of the first voltage and the plural drive voltages is out of a predetermined level range”.

In reference to claims 11-12:

“wherein said internal power supply controlling unit starts the operation of the internal power supply circuit when the detected first high voltage is higher than the first specific value, and stops the operation of the internal power supply circuit when the detected first high voltage is lower than the second specific value.”

In reference to claims 23-24:

“wherein when any level of the plural drive voltages detected by the voltage detection unit is out of an predetermined level range, the operation of the internal power supply circuit, corresponding to the drive voltage which is detected to be out of predetermined level range, is controlled to stop the operation.”

The closest prior arts of Criscimagna et al (U.S Patent No. 4,017,762) and Kurikco (U.S Patent No. 5,786,813) disclose similar systems which also having a detector unit to detects level of the first high voltage and multiple voltages produced from a first high voltage to control an internal power supply for saving power for the display system. However, either singularly or in combination, fail to anticipate or render above quoted limitations obvious.
